

Optional equipment to customize your kiln

THE VIEW WINDOW

- Too late, too early, or just right? See your work while it is firing so you can make adjustments on the fly.
- Polished quartz window stands up to any heat you throw at it.
- Available as an upgrade or easy do-it-yourself retrofit on Skutt GM22CS and GM1414 kilns.

KILN FURNITURE KIT

- Our Kiln Shelves and Posts are sold individually or as kits. A furniture kit is used to create

shelf layers inside your kiln. Although the contents of shelf kits vary depending on the kiln model, all shelf kits will contain a selection of shelves and 1 or more post assortment kits. All furniture kits are designed to fire up to 2350° F.

EASYVIEW TOUCHPAD

- Angled touchpad mount for easy viewing and programming. Can be ordered with a new kiln or as an upgrade to an existing kiln. Installs in minutes. Available for all GlassMaster kilns.

THE ENVIROVENT 2

- This Downdraft Vent System pulls fumes caused by glue and fiber paper directly from your firing chamber and vents them outside just like your dryer.

The motor mounts away from the kiln to eliminate the possibility of vibration affecting your artwork.

ENVIROLINK

- The EnviroLink allows you to program the controller to automatically turn the vent on and off throughout a firing program. You simply enter an on/off setting for each segment of a Ramp and Hold program while you are programming the kiln. There are preset "vent programs" that can be run in conjunction with a ConeFire Mode or GlassFire Mode program as well.

TYPE S THERMOCOUPLES

- This is the perfect thermocouple for anyone working with extremely long and critical annealing cycles. These thermocouples are made of platinum and will not drift at all. Available as an upgrade on new or existing kilns. Contact the factory before upgrading an existing kiln.

COMPUTER INTERFACE

- This system allows you to program, monitor and graph the firings of up to 10 GlassMaster controlled kilns using a PC. Installation is simple and quick. The system includes a CD with the software and all of the necessary hardware to connect your computer to the GM controller.

PYROMETER

- Skutt carries both kiln or wall-mounted analog pyrometers and hand-held digital pyrometers. These can be used to read the temperature on kilns that do not have digital controllers or used as a means of testing the accuracy of a digital controller.

ENERGY SAVING BRICK

- While the cost of firing a kiln is much less than most people think, every penny helps. 3" Brick offers 1/2" more insulation than standard brick and therefore costs less to fire. Available as an upgrade on models GM818 and GM1018. Standard on all GM1227-3 and GM1214-3 kilns.
