KS kiln won't start

Condition:
Klin Sitter kiln will not stay on or will not get warm.

Start

Does the main power button (plunger button) stay in?

Yes

Is the main power indicator light on?

No

Are the switches turned on? Infinite or low, med., high switches?

No

Either the light has burned out or there is no power to the kiln. Check circuit breaker and perform voltage TEST at outlet.

Make sure the timer is set. Turn the timer knob to the right all the way and then turn it completely to the left until it releases the main plunger button. Then turn the timer knob to the right to the desired number of hours for the firing and press the main power button on. Continue in flowchart if you still have problems.

No

Does the kiln have a timer?

No

Is the failure weight staying up under the claw?

No

Yes

Turn on the switches to desired temp.
